Ericom Connect®

Fast, Simple, Secure Browser-Based Remote Application and Desktop Access with No Endpoint Installation

Simple to Deploy - Easy to Use

Deploy Ericom Connect in under an hour and get access fast! With no client-side software, plugins or patches, it is a low complexity solution that requires no IT training or certification to configure or operate.

Users access their own applications and in-office desktop systems via standard browsers, using any type of device, corporate or BYOD, and from any network. Ericom Connect delivers an intuitive and smooth experience for users, including support for MFA and 2FA, and minimizes calls to your IT help desk.

Why Ericom Connect is the Right Choice for Your Business

Great User Experience

Easy HTML5 browser-based access to apps, desktops & data. Users' desktops and apps look and work just like they do in the office, so there's no learning curve. Native clients for desktops and mobile are also available.

Frees Up VPN Capacity

Provides secure encrypted communication with or without a VPN; Since no VPN is required, removing RDP traffic can free up much-needed VPN capacity for the organization.

Low TCO

With low infrastructure requirements, no specialized IT training, and no certification requirements, Ericom Connect is a cost-effective choice for remote access.

High Performance

Built-in RDP acceleration & compression technology minimize network latency, even in low bandwidth scenarios; multi-tenant architecture is designed for scalability.

Simple Identity Management

Users are seamlessly authenticated into their hosted web and Windows-based applications using standard SSO protocols (SAML or oAuth); Supports MFA and 2FA.

Minimal Impact on IT Team

Simple set-up, intuitive user experience, easy monitoring, and advanced reporting together minimize help desk volume and IT burden, while enhancing visibility.

Technical Highlights

100% Web-based Administration

Easy-to-use, unified admin console enables IT staff to centrally deploy, manage and monitor all resources and users from a single web-based interface.

Enterprise-Level Security

Includes strong security features, including real-time intruder monitoring, logging and event recording, MFA and VPN integration, integrated SSL Secure Gateway, and more.

Multi Data Center Support

Enterprises can effectively distribute their access infrastructures across multiple data center locations, while ensuring accessibility, reliability and business continuity.

Single Sign-On (SSO)

Supports seamless user authentication into their hosted Web and Windows-based applications through integration with standard SSO protocols (SAML or oAuth).

Powerful Reporting & Business Insight

Dozens of built-in reports provide a holistic view of system resources, users and session activity, making it simple to track and optimize application and desktop usage, monitor user productivity, measure system workload and health, and troubleshoot connectivity issues/errors.

Highly Scalable and Robust Architecture

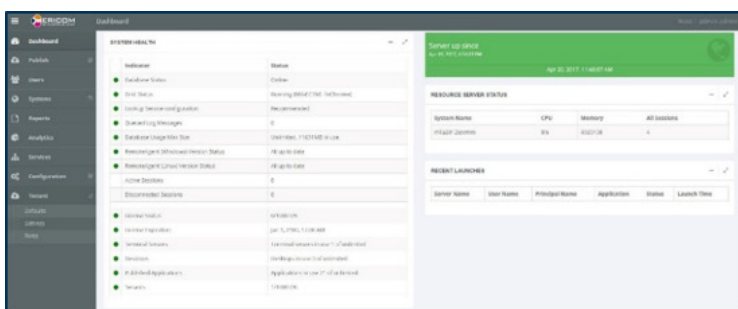

Supports thousands of hosting servers and hundreds of thousands of user sessions, with efficient management of applications and desktops.

Get home workers set up fast during COVID-19 related office closures with free 60-day licenses for Ericom Connect.

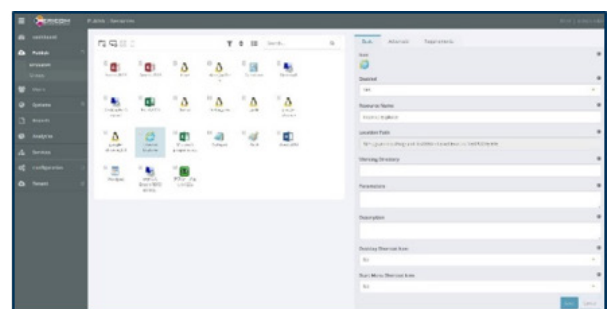

“Ericom Connect... The whole thing just feels really intuitive. You can create groups of applications, groups of servers, and groups of users that you then manage as a group. So you can associate a group of apps with AD items and apply groups to hosts.”

Brian Madden,
Virtualization Expert

Get an immediate, high level view of the health of your system with web-based admin console

Configure, customize and view all published applications and desktops

About Ericom Software www.ericom.com

Ericom Software provides businesses with secure access to the web and corporate applications, in the cloud and on-premises, from any device or location. Leveraging innovative isolation capabilities and multiple secure access technologies, Ericom's solutions ensure that devices and applications are protected from cybersecurity threats, and users can connect to only the specific resources they are authorized to access.
