

Essential business email protection by Red Sift

OnDMARC and OnINBOX work together to deliver both inbound and outbound email protection. From blocking attacks which use email impersonation to trick recipients into opening it, to detecting and flagging inbound email threats for end-users.

ONDMARC

Shut down domain fraud by blocking **outbound** email impersonation.

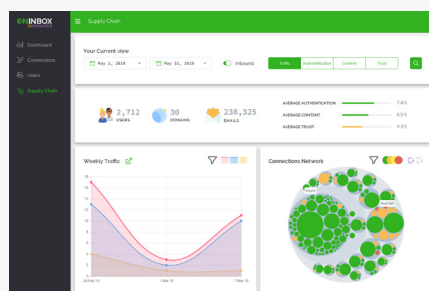

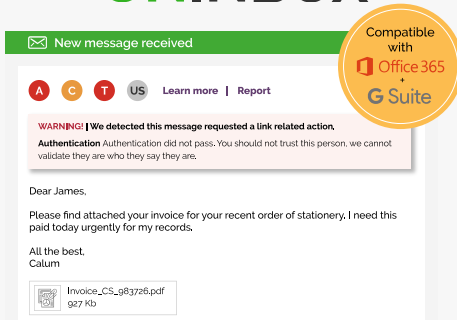

Powerful features

- > **Dynamic DMARC** - A single place to manage SPF, DKIM, and DMARC records that reduces errors and overcomes SPF's 10 lookup limit
- > **Investigate** - Fast-track setup by verifying results in seconds
- > **Threat Intelligence** - Quickly uncover and block bad senders

Key benefits

- ✓ See who is using your domain to send unauthorized emails
- ✓ Block phishing attacks
- ✓ Increase email deliverability
- ✓ Shut down spoofing and domain fraud

ONINBOX

Protect employees with intelligent **inbound** email threat detection.

Powerful features

- > **Customizable Warnings** - Alert users to risks using traffic light indicators and optional text-based banners inside every email
- > **Natural Language Processing** - Advanced content scanning understands human intent, topics and if there's a sense of urgency
- > **OnINBOX Manager** - A centralized view of organizational communications and email security

Key benefits

- ✓ Flag risks that bypass your secure email gateway and reach the inbox
- ✓ Immediate visibility of your suppliers and their associated email security
- ✓ Security teams can define and control an organizational Trust Network
- ✓ Email communications and their associated security form personalized Trust Networks that are automatically updated and accessible to every end-user.
