

MONITOR INDUSTRIAL  
CONTROL SYSTEMS

FIGHT OFF  
CYBERATTACKS

SECURE  
PLANT AVAILABILITY

## Your Advantages with Rhebo Industrial Protector

- ✓ **GAIN COMPLETE ICS TRANSPARENCY** through detailed asset inventory of components, properties and connections.
- ✓ **ENABLE FAST INVESTIGATION AND MITIGATION** of incidents through detailed incident logging with forensic data.
- ✓ **SUPPORT IT/OT COLLABORATION** with standard APIs to SCADA, SIEM, IT monitoring and other systems.
- ✓ **FIGHT OFF CYBERATTACKS AND DOWNTIMES** through seamless identification of threats and technical error states.
- ✓ **SUPPORT CONTINUOUS IMPROVEMENT PROCESS** with risk analysis, real-time monitoring and advices.
- ✓ **PROTECT YOUR DATA** with backdoor-free technology »Made in Germany«.

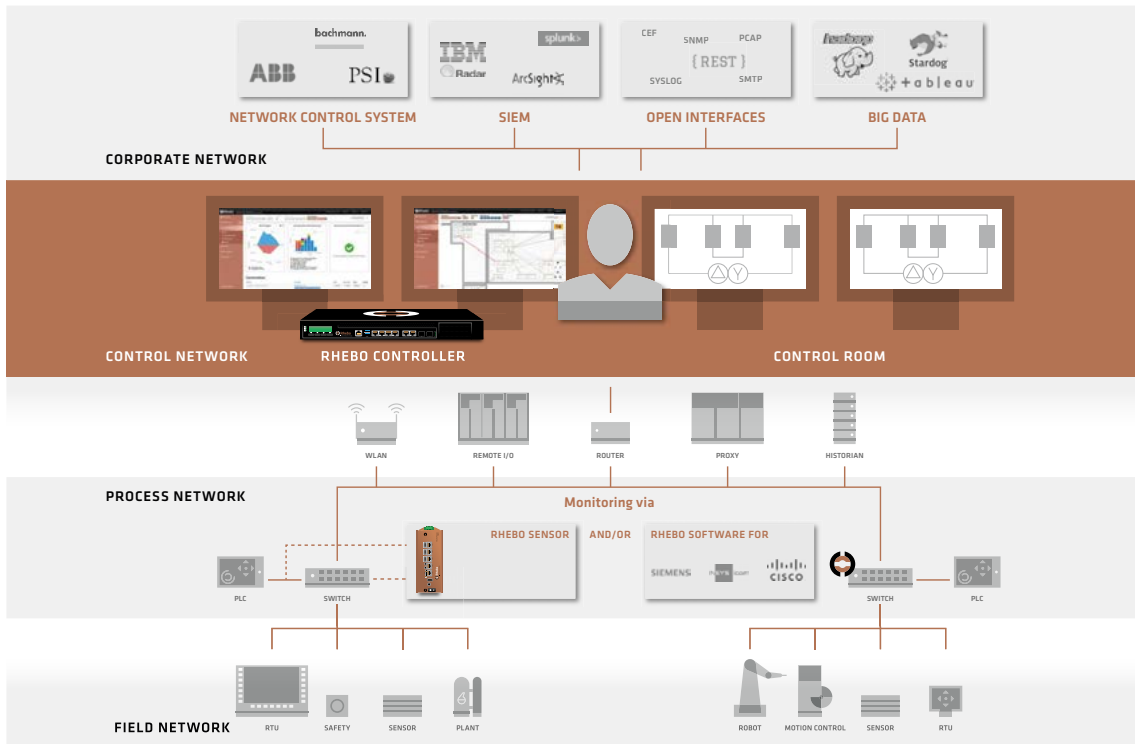

# Seamless Monitoring of ICS Communication

The industrial network monitoring and anomaly detection of Rhebo Industrial Protector monitors and analyzes all communication within Industrial Control Systems (ICS) in real-time. This also guarantees you an up-to-date inventory of all assets, connections and properties. The network monitoring functions non-intrusive without affecting the infrastructure.

Rhebo Industrial Protector analyzes every ICS communication on content level using Deep Packet Inspection. Any suspicious event within the ICS is reported and evaluated in real-time.

The notifications include cyber security relevant events as well as technical error states, such as network and component errors. Utilizing various functions such as risk assessment, network map, storage of forensic data, filters and interface integration, the anomaly detection actively supports the efficient analysis and elimination of incidents – either as continuous network condition monitoring or in reactive black box mode.

Operators can thus react actively to risk, eliminate errors more quickly and avoid unplanned downtimes.

## About Rhebo

Rhebo is the only company providing cybersecurity as well as stability for industrial control systems (ICS) in industrial and critical infrastructure companies. The German company's solutions monitor all communication within the ICS, and reliably report attacks, vulnerabilities as well as technical error states. Thus, Rhebo supports operators of ICS to increase cybersecurity, productivity and availability of

their systems and plants, and to safeguard the digital transformation of their processes. In this role, the company is actively involved in the Alliance for Cyber Security of the Federal Office for Information Security (BSI), the Teletrust - Bundesverband IT-Sicherheit e.V. and the Bitkom Security Management Working Group to develop standards and technical guidance.
