

Votiro Cloud API for...Anywhere

Votiro's flexible, API-centric zero trust content security solution fits into all existing file flows, including email, FTP, web isolation, cloud, applications, and anywhere files, data, and content moves.

Proactive Protection Against Hidden Malware & Ransomware

Votiro Cloud's open-API content disarm and reconstruction service enables organizations to adopt Zero Trust Content Security. Rather than focusing on looking for any malware in incoming content, *Votiro Cloud only allows known good content* to pass through into or throughout the organization.

Robust & Flexible API

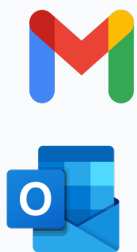

Votiro Cloud sanitizes malicious code and exploit threats from incoming files while preserving the integrity and functionality of the original file. *Votiro* protects against 150+ weaponized file types including .ppt, docs, pdfs, and image files, all the way to more complex formats like archives, zipped, and password-protected files.

Immediate Time-to-Value

Votiro Cloud's agentless technology is centrally managed in one dashboard. *Votiro Cloud SaaS* is installed in 10-90 minutes and immediately helps reduce alerts, threats, and work for your security/IT team. *Votiro Cloud* scales up and down to meet file throughput peaks and valleys. *Votiro* can sanitize 100,000+ files per hour.

Votiro Cloud: Integrates into your Existing Security & Technology Stack

Votiro Cloud: Scalable Zero Trust Content Security

Scales to Fit Your Environment

Votiro Cloud scales up and down to meet file throughput peaks and valleys. Votiro can sanitize 100,000+ files per hour.

SaaS or On-Prem

Votiro Cloud can be deployed flexibly: as a SaaS, in the Cloud, or as an On-Prem solution. Votiro Cloud's agentless technology is centrally managed in one dashboard.

Zero Trust Content Security Use Cases

Zero Trust Content Security can be applied to any channel that data, content, and files is incoming. For example, some use cases include:

- Accessing password protected files safely in O365 Email.
- Collecting large amounts of safe files in AWS S3 Data Lakes for use in secure digital services.
- Exchanging safe files using secure FTP with supply chain partners.
- Migrating content-rich applications to the cloud (such as Microsoft Azure).
- Downloading safe files from Google search using Google Chrome.
- Downloading safe files from web/cloud storage like Box, DropBox, or other content collaboration platforms.
- Downloading safe files shared in Slack for secure collaboration.
- Consumers uploading loan application information and supporting documents to a customer-facing portal.
- Business process optimization workflows that require multiple stakeholders to download, edit, and re-upload files.
- Preventing image steganography attacks.

Try Votiro Cloud
