

netsparkercloud

WEB APPLICATION SECURITY SCANNER

An enterprise & scalable solution that enables organisations to easily find vulnerabilities in their web applications & web services, and ensure their long term security.

Netsparker Cloud is an industry leading cloud-based web application security scanning solution that automatically scans custom web application for Cross-site Scripting (XSS), SQL Injection and other type of vulnerabilities. It has a unique Proof-Based Scanning Technology that generates a proof of exploit upon identifying vulnerabilities, proving they are real and not false positives. Netsparker Cloud is an enterprise-offering solution that allows you to easily get everyone involved, scale up processes, automate more and manage the long term security of all your web applications and web services.

BENEFITS

- Scale up the process of automatically finding vulnerabilities in web applications for more secure web applications.
- Centralize all vulnerability data and see the results in one place, anytime from anywhere.
- Scan and generate reports for vulnerabilities listed in the OWASP Top 10, PCI DSS and other compliance requirements.

- Dead Accurate
- Scalable & Agile
- Collaboration & Efficiency
- Integration
- Instant Alerting System

- Integrate efficient automated web vulnerability scanning at every stage of the SDLC, ensuring security issues are tackled at source.
- Save time and money by taking advantage of the Cloud-based solution that is maintenance free and always readily available.
- Identify, fix and manage vulnerabilities in your web applications with easy to use multi-user workflow tools.
